## Top 10 Average Inflation rate by Country

## Top 10 Countries by exports

## Lowest 10 Countries by exports

# INSIGHTS

## 1 Wealth vs. Longevity Gap

**INSIGHT**

There is a strong positive correlation between GDP per capita and life expectancy.

**DATA**

High-income entities like Andorra, Macau, and Singapore achieve an average life expectancy exceeding 81–84 years, whereas Africa averages 52.38 years (with certain nations dropping below 37 years).

**TAKEAWAY**

Economic prosperity directly translates into superior healthcare infrastructure and longer life expectancy.

## 2 Infant Mortality Crisis in Low-Income Nations

**INSIGHT**

Severe infant mortality rates are overwhelmingly concentrated in developing and low-income economies.

**DATA**

Countries like Angola (191), Afghanistan (163), and Sierra Leone (144) record the highest infant mortality rates per 1,000 live births.

**TAKEAWAY**

This highlights a major disparity in preventative healthcare and maternal health resources across lower-income regions.

## 3 Economic vs. Demographic Disparity

**INSIGHT**

Global population density is heavily disconnected from the distribution of worldwide wealth.

**DATA**

Asia accounts for over 60.67% of the global population (~4 billion people), yet global economic output remains heavily concentrated in major powers like the United States ($11.75T) and China ($7.26T).

## 4 Impact of Hyperinflation on Stability

**INSIGHT**

Extreme inflation rates severely erode purchasing power and hamper economic progress in vulnerable regions.

**DATA**

Zimbabwe (1.33 / 133%), Dominican Republic (0.55 / 55%), and Angola (0.44 / 44%) display the highest inflation rates globally.

**TAKEAWAY**

Uncontrolled inflation acts as a primary bottleneck to sustainable economic growth, regardless of raw resource availability.

## 5 Global Trade Concentration

**INSIGHT**

International export and import volumes are dominated by a handful of industrial powerhouses.

**DATA**

Germany ($0.89T), the United States ($0.80T), and China ($0.58T) lead global exports, whereas small island territories (e.g., Mayotte, Anguilla, Tuvalu) show near-zero export activity.
